                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                lupus erythematosus; cancer such as leukemia, lymphoma, or multiple sclerosis, and systemic scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see AEC02021), that that bind RAFF
                                                                                                         The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic
                                                                                                                                                                                                                                                           New polypeptides that inhibit APRII and/or BAFF binding to BCMA, for treating immune-related disease, cancer or T-cell mediated d such as graft rejection, graft versus host disease (GVHD) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    maturation antigen (BCMA), or an antibody against BCMA or a BCMA ligand (the mammal has or is at risk of developing multiple sclerosis). The method of the invention has neuroprotective, nootropic, and antiinflammatory activity, and may have a use in gene therapy. The methods, BCMA, and antibodies are useful for treating a neurodegenerative immunological disorder such as multiple sclerosis, demyelination or CNS inflammation. The present sequence is used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematous; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see AEC02021), that that bind BAFF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Formula II derived polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see ABC02021), that that bind BAFF.
                                                                                                                                                                               APRIL; BAFF; immune disorder; immunomodulator; antiinflammatory; cancer; cytostatic; neoplasm; immunosuppressive; therapeutic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 34 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptides that inhibit APRII and/or BAFF binding to BCMA, for treating immune-related disease, cancer or T-cell mediated d such as graft rejection, graft versus host disease (GVHD) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes polypeptides that bind APRIL or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents polypeptide of the invention that binds APRIL, derived from AECO2012.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation.
                                                                                       New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and
                                                                                                                                                                                                                                                                                                                                                               Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a BCMA-Fc fusion protein, where IZ2 of BCMA is changed to Lys.
                                                                                                                                                                                                                                                                                                                                                                                       WPI;
                                                                                           The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus, cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVMD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see AEC02021), that that bind BAFF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AEC02025 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 296 AA;

                                                                                                                                                                                                                                                                                                                                The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tunor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rewmatcoid arthritis, multiple scherosis, and systemic lupus erythematosus, cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see AEC02021), that that bind BAFF.

The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA), APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence

The specification describes polypeptides that bind APRIL or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic
                                                                                                                                                                 New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, for treating immune-related disease, cancer or T-cell mediated disease graft rejection, graft versus host disease (GVHD) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (BCMA) APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVMD) and inflammation. The present sequence represents polypeptide of the invention that binds APRIL, derived from
                                                                                                                  Claim 7;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                         The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see AEC02021), that that bind BAFF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, for treating immune-related disease, cancer or T-cell mediated d such as graft rejection, graft versus host disease (GVHD) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The specification describes polypeptides that bind APRIL or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents polypeptide of the invention that binds APRIL, derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APRIL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AEC02019

BAFF-R, Kusion proteins containing it, and BAFF-R. CC specific antibodies can be used for inhibiting B-cell growth, dendritic cc cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders, B-cell lymphoproliferative cc and in the treatment of immunosuppressive disorders and HIV the control of immunosuppressive disorders and HIV the control of immunosuppressive disorders and HIV the control of infection, and in patients undergoing organ transplantation. The BAFF-R cc proteins or BAFF-R specific antibodies may be used for treating, between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R cc inhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, cc Grave's disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding thuman BAFF-R may be used in gene therapy to treat tumours, lymphomas, cautoimmune disorders and inherited B-cell-associated disorders. The present sequence represents a human BAFF-R protein sequence as encoded by plasmid py57535. However, this BAFF-R protein sequence is 27 amino acids charter than there crime in hardfords.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting dendritic cell-induced B-cell growth, maturation and B-cell lympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-R antibody homolog.
                                                                                                                                                           Sequence 157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the use of a BAFF receptor (BAFF-R, also known as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF-R is a member of the TNF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   17-AUG-1999; 99US-0149378P.

                                                                                                                                                                                                                                                                                                                                                                                                  neutrokine-alpha protein. The three-dimensional structure of a neutrokine-alpha protein is useful in determining the three-dimensional of other neutrokine-alpha proteins and their homologs. The compounds that mimic, prevent or inhibit the activity of the protein are useful for treating cancer, allergic disorders, or autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, Crohn's disease, diabetes, systemic lupus erythematosus or asthma. This sequence represents the residues in the receptor for binding a cytokine ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New crystalline Neutrokine-alpha protein, useful for designing compounds that bind, inhibit or mimic a Neutrokine-alpha protein or enhance the activity of a Neutrokine-alpha protein for treating e.g. cancer or

The specification describes a method of identifying a polypeptide which increases gene expression from a promoter. The method involves contacting a library of with a cell which expresses a recombinant anti-cell death gene and a reporter gene operably linked to the promoter, and then determining whether the expression of the reporter gene is altered as a result of contact with library. The method is useful for identifying polypeptides which increase or decrease gene expression from a promoter. The BCMA polypeptide or nucleic acid are useful for preparing a pharmaceutical composition for treating cancer, apoptosis, viral infections, inflammatory response, such as rheumatoid arthritis, inflammatory bowel disease or septic shock. BCMA is useful for dentifying compounds that modulate NF-kB expression and thus for drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proteins (including homologues), and their antibodies. The invention in CC particular relates to methods for regulating the interaction between TALL CC -1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to CC regulate monocyte, macrophage and B lymphocyte mediated immune responses. CC TALL-1 protein is useful for identifying compounds that regulate B CC lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus CC erythematosus (SLE), insulin dependent diabetes mellitus, multiple CC enaemia, autoimmune thrombocytopenia purpura, Goodpasture's syndrome, CC pemphigus vulgaris, acute rheumatic fever, post-streptococcal CC glomerulonephritis, or polyarteritis nodosa. The TALL-1 protein and its C corresponding nucleic acid sequence are also useful in diagnostic assays. C The present sequence is a murine B cell maturation factor (BCMA). BCMA is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering protein (BCMA) activity in a mammal. The method comprises factor-TNF constitution for APRIL (G70, a tumour negrois factor-TNF constitution for activities the constitution of mature for APRIL (G70, a tumour negrois factor-TNF constitution).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for inhibiting TACI activator and intracellular CAML interactor) and/or B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides novel tumor necrosis factor receptor ztnfr14 polymucleotides ADZ67753 and polymecleotides ADZ67754, expression vectors and antibodies. Human ztnfr14 polymucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides can be used to detect ligands, agonists and used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of murine TNFR BCMA. This sequence was compared with that of murine ztnfr14 ADZ67756 in the identification of ztnfr14 as a member of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC protein (BCMA) activity in a mammal. The method comprises administering a CC specific binding partner for APRIL (G70, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC dermatitis, respiratory allergic disease (asthma, hypersensitivity lung Cdisease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple Sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer companse BCMA protein-human immunoglobulin Fc region fusion protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     defined sequence in the specification. The composition is useful in modulating the activity of TALL-1, and in treating, preventing, ameliorating, diagnosing or prognosing a B-cell-mediated autoimmune disease (e.g. systemic lupus erythematosus) or B-cell-mediated cancer or lymphoma. The composition may also be used in treating inflammations (e.g. rheumatoid arthritis), acute pancreatitis, Alzheimer's disease, asthma, atherosclerosis, cachexia, cirrhosis, diabetes, injury, multiple glemerulonephritis, Hashimoto's thyroiditis, ischaemic injury, multiple myeloma, multiple sclerosis, osteoporosis, Parkinson's disease, psoriasis and vasculitis. Disorders may be treated with the novel composition using gene therapy. This sequence represents a TALL-1 related protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC protein (BCMA) activity in a mammal. The method comprises administering a CC specific binding partner for APRIL (G70, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for inhibiting activity of TACI CC quarteristic or prostate tumour such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple Sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence cis human-murine B cell maturation protein (BCMA) consensus sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                               Best Local
                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                 lymphoproliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human-murine B cell maturation protein (BCMA) consensus sequence cysteine rich region. (Updated on 29-AUG-2003 to standardise OS field)
Human; BR43x2; TACI receptor; extracellular domain; BCMA; B cell prote transmembrane activator and CAML-interactor; tumour necrosis factor; ztnf4 activity; antibody production; autoimmune disease; amyloidosis; systemic lupus erythematosus; myasthenia gravis; multiple sclerosis; rheumatoid arthritis; asthma; bronchitis; emphysema; pyelonephritis; end stage renal failure; glomerulonephritis; vasculitis; nephritis; renal neoplasm; multiple myeloma; lymphoma; light chain neuropathy;

BCMA (a related B cell protein) contain a cysteine rich domain, and are used for inhibiting ztnf4 activity. They may also be used for inhibiting BR43x2, TACI or BCMA receptor-ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an autoimmune disease selected from systemic lupus erythematosus, myasthenia gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity and BR43x2, TACI or BCMA receptor-ligand engagement is associated with asthma, bronchitis, emphysema, end stage renal failure, glomerulonephritis, vasculitis, nephritis, pyelonephritis, renal neoplasms, multiple myelomas, lymphomas, light chain neuropathy, amyloidosis, moderating immune response, inflammation, insulin dependent diabetes mellitus, Crohn's disease, joint pain, swelling, anaemia, or septic shock. BR43x2, TACI, and BCMA polypeptides, fusions, antibodies, agonists or antagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol

The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for treating carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (viii) for neutralizing the effect of CAP; (xi) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CAP. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published

Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides, polynucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of murine TNFR TACI. This sequence was compared with that of murine ztnfr14 ADZ67756 in the identification of ztnfr14 as a member of the TNFR family.
The present invention relates to a method of characterizing proteins present in the plasma membrane (PM) of live cells. The proteins of the invention are useful in identifying diagnostic markers and potential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New tumor necrosis factor receptor (TNFR) polypeptides, useful detecting ligands, and for modulating tumor growth, metastasis immunity, such as separating resting from stimulated immune cei

                                                      The present invention relates to novel mucin-like proteins (I) and their coding sequences. The mucin-like proteins and coding sequences are useful in the therapy or in the prevention of a disease when the increase in the mucin-like activity of a polypeptide is needed e.g. bacterial infections, allergic asthma, inflammation, respiratory syncytial virus (RSV)-induced disease, allergic conjunctivitis, otitis, tissue injury, epithelial wounding, inflammatory bowel disease, Crohn's disease, small adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia, chronic cholecystitis, or skin cancer. The present sequence is a mucin glycoprotein which was used in a sequence alignment with the mucin-like proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibacterial; Virucide; Antiallergic; Antiasthmatic; Antiinflammatory; Ophthalmological; Auditory; Vulnerary; Gastrointestinal; Cytostatic; Gene Therapy; Mucin-like protein; human; mucin; bacterial infection; allergic asthma; inflammation; viral infection; allergic conjunctivitis; otitis; tissue injury; epithelial wounding; inflammatory bowel disease; Crohn's disease; small adenocarcinoma of the lung; lung cancer; gastric intestinal metaplasia; chronic cholecystitis; skin cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   drugs. The invention is useful for identifying drugs for diagnosing and treating disorders such as cancer which are associated with abnormal representation of cell surface proteins. The present sequence is mouse tumor necrosis factor receptor superfamily member 13b protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated mucin-like polypeptides, useful for diagnosing or treating, e.g. bacterial infections, allergic asthma, inflammation, allergic conjunctivitis, otitis, inflammatory bowel disease, Crohn's disease, lun
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 2;

                                                                                                                                          coding sequences. The present sequence is one such human mucin-like protein. The mucin-like proteins and coding sequences are useful in the therapy or in the prevention of a disease when the increase in the mucin-like activity of a polypeptide is needed e.g. bacterial infections, allergic asthma, inflammation, respiratory syncytial virus (RSV)-induced disease, allergic conjunctivitis, otitis, tissue injury, epithelial wounding, inflammatory bowel disease, Crohn's disease, small adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia, chronic cholecystitis, or skin cancer.

                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel mucin-like proteins (I) and their coding sequences. The present sequence is one such human mucin-like protein. The mucin-like proteins and coding sequences are useful in the therapy or in the prevention of a disease when the increase in the mucin-like activity of a polypeptide is needed e.g. bacterial infections, allergic asthma, inflammation, respiratory syncytial virus (RSV)-induced disease, allergic conjunctivitis, otitis, tissue injury, epithelial wounding, inflammatory bowel disease, Crohn's disease, small adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia, chronic cholecystitis, or skin cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein. The mucin-like proteins and coding sequences are useful in the therapy or in the prevention of a disease when the increase in the mucin-like activity of a polypeptide is needed e.g. bacterial infections, allergic asthma, inflammation, respiratory syncytial virus (RSV)-induced disease, allergic conjunctivitis, otitis, tissue injury, epithelial wounding, inflammatory bowel disease, Crohn's disease, small adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated mucin-like polypeptides, useful for diagnosing or treating, e.g. bacterial infections, allergic asthma, inflammation, allergic conjunctivitis, otitis, inflammatory bowel disease, Crohn's disease, lun
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gene Therapy; Mucin-like protein; human; mucin; bacterial infection; allergic asthma; inflammation; viral infection; allergic conjunctivitis; otitis; tissue injury; epithelial wounding; inflammatory bowel disease; Crohn's disease; small adenocarcinoma of the lung; lung cancer; gastric intestinal metaplasia; chronic cholecystitis; skin cancer.
                                                                                                                                                                                                                                                                      Mouse subtilisin-like protein convertase
                                                                                                                                                                                                                                                                                                                                                                    18-DEC-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a transgenic mouse (I) comprising a disruption an subtilisin-like protein convertase (SPC6) gene, where there is no native expression of an endogenous SPC6 gene. The therapeutic agent is administered by inhalation or insufflation or oral, buccal, parenteral, topical, subcutaneous, intraperitoneal, intravenous, intrapleural, intraocular, intraraterial, or rectal route. The transgenic mouse and associated methods are useful for identifying potential therapeutic agents (e.g. SPC6 agonists and antagonists) for treating conditions associated with SPC6. The identified agents are potentially useful for treating diseases such as schizophrenia. The mouse is useful for investigating the biological roles of SPC6. This is the amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC coding sequence is located on chromosome 9q21.13. Related EST's are CC expressed in kidney (renal cell adenocarcinoma), head and neck tissue, CE heart, multiple sclerosis lesions, cervix, pooled germ cell tumours, cuterus tumour, adenocarcinoma, retina II and stomach. The subtilisin CC protein is a long membrane bound protein which shows 96% identity to like repeats in the C-terminal portion of the protein. It has one CC transmembrane domain, also in the C-terminal portion, suggesting that the CP protein is localised on the outside of the membrane. The subtilase CC protein is localised on the outside of the membrane. The subtilase CC polynucleotide and polypeptide are useful for identifying test compounds, CC which may act as agonists or antagonists at the receptor site and which CC can be regulated to provide therapeutic effects. Vectors comprising the CC disease, e.g. a central nervous system disorder, a gastrointestinal confidence of a cardinary disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lymphoproliferative disorders, one or more solid tumours such as lung gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human TACI cysteine-rich consensus region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACT BCMA ACTIVITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor family
             antithyroid; antipyretic; nephrotropic; vasotropic; vaccine; autoimmune disease; rheumatoid arthriti; systemic lupus erythematosus; insulin dependent diabetes mellitus; multiple sclerosis;
                                                                                    TALL-1; antagonist; immunosuppressive; antirheumatic; antiinflammatory;

                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel TALL-1 antagonist protein, comprising a cequence that differs from SEQ ID NO:2, or amino acids 114-285 of SEQ ID CC NO:2, by at least one modification in the region connecting &bgr; strands CC D and E that reduces the biological activity of the TALL-1 antagonist as compared to wild-type TALL-1. A protein of the invention has immunosuppressive, antidiabetic, antinflammatory, antiarthritic, CC dermatological, antidiabetic, neuroprotective, antityroid, antipyretic, CC nephrotropic, and vasotropic activity. A TALL-1 antagonist may be used in a vaccine. A protein of the invention is useful for inhibiting TALL-1 cc biological activity in a mammal. TC is useful for treating autoimmune diseases, rheumatoid arthritis, systemic lupus erythematosus, insulin CC diseases, rheumatoid arthritis, systemic lupus erythematosus, insulin CC Grave's disease, autoimmune hemolyteic anaemia, autoimmune cutering disease, autoimmune hemolyteic anaemia, autoimmune vulgaris, conterphenotytopenic purpura, Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis and company (CDN) and (CDN) account sequence represents a cysteine rich company (CDN) accounts sequence represents a cysteine rich

                                                                                                                                                                                           cc used to treat diseases characterised by inflammatory processes or common to the disease characterised by inflammatory processes or common disease, Crohn's disease, lupus, etc. [I] is also useful in the cc production of hybridoma cells which are derived from B cells, which cc involves treating the hybridoma cells with [II]. (II) is useful in the ct treatment of inflammatory conditions of joints, e.g., rheumatoid cc arthritis, osteoarthritis, etc. (II), its agonists or antagonists are cuseful for treating acute pancreatitis, amyctrophic lateral sclerosis cc (ALS), Alzheimer's disease, asthma, atherosclerosis, cachexia/anorexia, cc diabetes, fever, glomerulonephritis, inflammatory bowel disease, multiple sclerosis, osteoporosis, Parkinson's disease, pain, reperfusion injury, cc septic shock, etc. The nucleic acids are also useful for developing coplypeptides and for the study of in vivo biological activity. The coresents the amino acid sequence of human AGP-3 cc cysteine-rich repeat region #1
                                                                               Matches
                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition (I) comprising AGP-3 receptor (tumour necrosis factor ligand family member) related protein (II) attached to a vehicle protein (I) is useful for modulating AGP-3-related activity in mesenteric lymph nodes (MLN) of a mammal. (II) is useful in assays to identify cells and tissues that express AGP-3R or proteins related to AGP-3R-related protein and for identifying compounds (agonists or antagonists) that interact with AGP-3R proteins. (II) is also useful for identifying intracellular proteins that interact with the respective cytoplasmic domains by yeast two-hybrid screening process. (II) is involved in B cell growth, survival and activation particularly in lymph node, spleen, and Peyer's patches. AGP-3R agonists and antagonists identified using (II) are used for modulating B cell response and are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition, useful for identifying modulator of receptor for treating asthma and glomerulonephritis, comprises AGP-3 (tumor necrosis factor ligand family member) receptor and encoding nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pancreatitis; amyotrophic lateral sclerosis; ALS; Alzheimer's disease; diabetes; glomerulonephritis; inflammatory bowel disease; ischaemia; multiple sclerosis; Parkinson's disease; transgenic animal.

                                                                                                                                                                                                                                                                                                                                                                                    vectors and antibodies. Ztnfr14 polymucieurus and the vectors and antibodies. Ztnfr14 polymucieurus and for methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides, polymucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of the Cys-rich domain of human TNFR TACI ADZ67771. This sequence was compared with that of ztnfr14 in the identification of ztnfr14 as a member of the TNFR family.

                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method for inhibiting TACI (transmembrane CC activator and intracellular CAML interactor) and/or B cell maturation CC protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (670, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/C BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA in a membal suseful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC dermatitis, respiratory allergic disease (asthma, hypersensitivity lung CC disease), drug and insect sting allergy, inflammatory bowel disease (C crohn's disease, colitis), scleroderma, autoimmune disease (multiple CC sclerosis, rheumatoid arrhritis, systemic lupus erythematosus), fungal, CC bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer cwith leucocyte infiltration of the skin or organs. The present sequence cc is human TACI cysteine-rich extracellular region
                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   regulate B cell responses without affecting T cell activity. The extracellular domain of TACI functions as a binding site for a ligand that stimulates the activation of the cell by inducing the binding of C-terminal portion (see AAW75784) of TACI to the N-terminal domain of CAML. A recombinant form of the extracellular portion of TACI acts as dominant-negative or blocking agent and acts to suppress the immune system. It can be used to treat or prevent autoimmune disease, graft rejection or graft versus host disease. The extracellular region is all used in a claimed method for identifying a ligand for TACI, in which binding of a candidate molecule is determined by detecting cellular activation of the AP-1, CAMP or NF-KB pathway, of NF-AT transcription factor, or of NF-AT dependent transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        lymphocyte surface receptor; human; B-cell; B lymphocyte; infection; cancer; rheumatoid arthritis; autoimmune disease; glomerulonephritis; immunosuppressive, graft versus host disease; transplant rejection; therapy; signal transduction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     extracellular, domain of novel human transmembrane activator and CAML-interactor (TACI) protein (see AAWT5733). TACI is a lymphocyte receptor protein that is involved in the calcium activation pathway. It is normally present in B-lymphocytes, and to a much lesser extent in immature T-lymphocytes, and to a targetted to specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 166 AA;

                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                        cc protein (BCMA) activity in a mammal. The method comprises administering a compecific binding partner for APRIL (G70, a tumour necrosis factor-TNF cf family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region cc of TACI or BCMA in a mammal which is useful for inhibiting activity of TACI or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, cgastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI cantagonists are useful for treating inflammation and immune function cdiseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic cdiseases, drug and insect sting allergy, inflammatory bowel disease (Ctrohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, colacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human TACI protein extracellular domain

                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                  RESULT 76
                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an isolated polypeptide comprising an CC extracellular domain of the transmembrane activator and calcium-signal CC modulating cyclophilin ligand (CAML) interactor (TACI), and a trimerising CC polypeptide. Also described: (1) a homotrimeric protein complex CC comprising the polypeptide; (2) an expression vector comprising the polypeptide; (2) an expression vector comprising the ccid sequence encoding the polypeptide, and a transcription promoter, the nucleic cc following operably linked elements, a transcription promoter, the nucleic cc acid sequence encoding the polypeptide, and a transcription vector, cc where the cell into which has been introduced the expression vector, cc where the cell expresses the polypeptide; (4) producing a homotrimeric cc protein complex by culturing the cell, and recovering the homotrimeric cc protein complex. The polypeptide has antiinflammatory, antiarthritic, and controlling inflammatory, antiarthritic and cytostatic cativities, and can be used in gene therapy. The polypeptides are useful for treating and controlling inflammatory diseases, e.g. rheumatoid cathritis or inflammatory bowel disease, autoimmune disease.

CC atherosclerosis, osteoporosis, almograft rejection and cancer. The presents a human TACI and heat shock binding protein (HSBP) fusion protein fragment, which is used in the exemplification of
                                                                                                                                                                                                                                                                                            Query Match

The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity. TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukasemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psoriasis and lupus erythematosus. The present sequence is human TACI splice variant protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents an alternatively spliced human TACI polypeptide. The specification also describes BR3 polypeptides. TACI and BR3 are receptors. Tumour necrosis factor (TNF) family ligands TALL-1 and April bind to the TACI receptor, while TNF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for preparing a composition for treating systemic lupus erythematosus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding a TACIs or preparing a composition for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises a method of depleting B cells from a mixed population of cells, the method involves contacting the mixed population of cells with BLYS antagonist (e.g. an immunoadhesin) and a CD20 binding antibody (e.g. hu2H7.v16). The method of the invention is useful for treating B cell malignancies and autoimmune disorders, such as: non-Hodgkin's lymphoma, Hodgkin's disease, follicular center cell lymphoma, lymphocytic leukemia, Hairy cell leukemia, rheumatoid arthritis, systemic lupus erythematosus, Wegener's disease, inflammatory bowel disease, idiopathic thrombocytopenic purpura, multiple sclerosis, asthma, psoriasis, Igh nephropathy, myasthenia gravis, vasculitis, diabetes and glomerulonephritis. The present amino acid sequence represents a human
                                                                                                                                                  Composition, useful for identifying modulator of receptor for treating asthma and glomerulonephritis, comprises AGP-3 (tumor necrosis factor ligand family member) receptor and encoding nucleic acids.
                                                                                                                                                                                                                                                                                        WPI; 2002-049441/06.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence represents the amino acid sequence extracellular domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  related to AGP-3R-related protein and for identifying compounds (agonists or antagonists) that interact with AGP-3R proteins. (II) is also useful for identifying intracellular proteins that interact with the respective cytoplasmic domains by yeast two-hybrid screening process. (II) is involved in B cell growth, survival and activation particularly in lymph node, spleen, and Peyer's patches. AGP-3R agonists and antagonists identified using (II) are used for modulating B cell response and are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ed to a vehicle protein. (I) is useful for modulating AGP-3-reity in mesenteric lymph nodes (MLN) of a mammal. (II) is useful to identify cells and tissues that express AGP-3R or proteins
                                                                                                                                                                                         ZYMOGENETICS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides novel tumor necrosis factor receptor (TNFR) ztnfr14 polynucleotides ADZ67753 and polypeptides ADZ67754, expression vectors and antibodies. Ztnfr14 polynucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides, polynucleotides and methodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of human TNFR TACI. This sequence was compared with that of ztnfr14 in the identification of ztnfr14 as a member of the TNFR family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC and CAML-interactor (TACI) protein, a lymphocyte receptor protein that is convolved in the calcium activation pathway. TACI is normally present in B CC -lymphocytes, and to a much lesser extent in immature T-lymphocytes, and coa much lesser extent in immature T-lymphocytes, and coa much lesser extent in immature T-lymphocytes, and coa without affecting T cell activity. TACI cDNA (seev57328) was isolated CC without affecting T cell activity. TACI cDNA (seev57328) was isolated CC from a B-lymphocyte cDNA library using a yeast two-hybrid assay. Also CC claimed are the C-terminal (see AAW75784) and N-terminal (see AAW75785) CC fragments of TACI, recombinant DNA constructs, unicellular hosts, and CC antibodies to TACI protein. Methods are claimed for identifying a ligand CC for TACI and for identifying immunosuppressive drugs that selectively CC block the action of B lymphocytes without affecting mature T lymphocytes. CC TACI can be activated to increase immune system activity, e.g. for creating infections or cancers. It can be blocked to provide immunosuppression, e.g. for treating autoimmune and inflammatory CC conditions such as immune complex- induced vasculitis, collagen-induced archiritis, seperimental allegic and hyperacute CC collagen-induced archiritis, experimental allegic and hyperacute CC conditions contains the complex of the collagen-induced archiritis, systemic lupus erythematosus, CC transplant rejection, cancer or graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC or BCMA (a related B cell protein) receptor contain a cysteine rich codomain, and are used for inhibiting ztnf4 activity. Ztnf4 is a TNF cc ligand. They may also be used for inhibiting BR43x2, TAGI or BCMA creceptor-ligand engagement associated with activated or resting B cc lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an autoimmune disease selected from cc systemic lupus erythematosus, myasthenia gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity and BR43x2, TACI or BCMA creceptor-ligand engagement is associated with asthma, bronchitis, cemphysema, end stage renal failure, glomerulonephritis, vasculitis, cemphritis, pyelonephritis, renal neoplasms, multiple myelomas, lymphomas, clight chain neuropathy, amyloidosis, moderating immune response, inflammation, insulin dependent diabetes mellitus, Crohn's disease, joint colypeptides, fusions, antibodies, agonists or antagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TWF (tumour necrosis factor) especially TALL-1, APRIL and TMF receptor (TWFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity TALL-1 and APRIL attagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukasemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psoriasis and lupus erythematosus. The present sequence is human TACI protein
                         Use of new interactions between tumor necrosis factor receptors (TACI) and TACI ligands to screen candidate molecules for determining agonist and antagonist interactions which are used for treating inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; transmembrane activator and CAML interactor; TACI; tumour necrosis factor receptor; TNF; autoimmune disease; diabetes; calcium-signal modulating cyclophilin ligand; CAML; viral infection; neutrokine alpha polypeptide; TACI-Ligand; TACI-L; cytostatic; therapy; neuroprotective; antidiabetic; antiviral; antiinflammatory; tumour; antiarthritic; antirheumatic; immunosuppressive; multiple sclerosis; rheumatoid arthritis; graft rejection; inflammation; cell proliferation; cell death immunosuppressive;
